FIGURE 12-6:
Set user account
info here.

- » **Account Is Disabled:** This option allows you to create an account that you don't yet need. As long as the account remains disabled, the user won't be able to log on. See the upcoming section, "Disabling and Enabling User Accounts," to find out how to enable a disabled account.
- » **Smart Card Is Required for Interactive Logon:** If the user's computer has a smart card reader to read security cards automatically, select this option to require the user to use it.
- » **Account Is Trusted for Delegation:** This option indicates that the account is trustworthy and can set up delegations. This advanced feature usually is reserved for Administrator accounts.
- » **Account Is Sensitive and Cannot Be Delegated:** This option prevents other users from impersonating this account.
- » **Use DES Encryption Types for This Account:** This option beefs up the encryption for applications that require extra security.
- » **Do Not Require Kerberos Preauthentication:** *Kerberos* refers to a common security protocol used to authenticate users. Select this option only if you are using a different type of security.
