

**FIGURE 16-10:**  
Confirming  
the scope.

## 16. Click OK.

The domain is added to the scope, as shown in Figure 16-11.

## 17. Close the Group Policy Management window.

The new GPO is now active.

**FIGURE 16-11:**  
The GPO is  
finished.

# Filtering Group Policy Objects

One of the most confusing aspects of Group Policy is that even though it applies to users and computers, you don't associate GPOs with users or computers. Instead, you link GPOs to sites, domains, or organizational units (OUs). At first glance, this aspect may seem to limit the usefulness of Group Policy. For most simple networks, you'll work with Group Policy mostly at the domain level and occasionally at the OU level. Site-level GPOs are used only for very large or complex networks.
