

3. Select VHDX, and then click Next.

When you click Next, the Choose Disk Type option page is displayed, as shown in Figure 10-7.

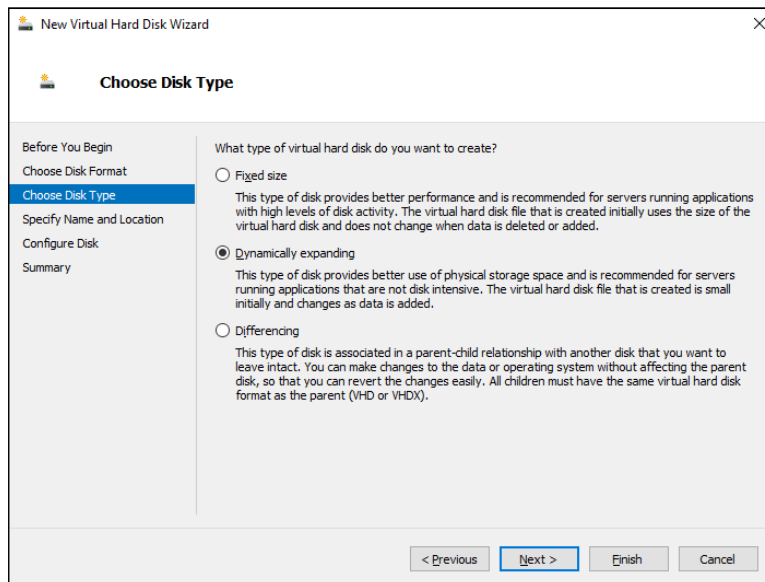

FIGURE 10-7:
Choose your
disk type.

4. Select the disk type you want to use.

The options are Fixed Size, Dynamically Expanding, and Differencing. Choose Fixed Size if you're concerned about the performance of the disk; otherwise, choose Dynamically Expanding.

5. Click Next.

The Specify Name and Location page, shown in Figure 10-8, appears.

6. Specify the name and location of the new disk.

Type any name you want for the virtual disk drive. Then click the Browse button to browse to the disk location where you want Hyper-V to create the .vhdx file.

TIP

Make sure you choose a location that has enough disk space to create the .vhdx file. If you're creating a dynamically expanding disk, you should ensure that the location has enough space to accommodate the drive as it grows.

7. Click Next.

The Configure Disk page appears, as shown in Figure 10-9.
