Windows remembers every network you connect to, which is a plus for networks
you frequently use but a drawback for networks you'll likely never use again. To
tell Windows to forget a network, follow these steps:

1. **Click Start, and then click Settings.**

   The Settings window appears.

2. **Click Network & Internet.**

   This brings up the Network & Internet page, which lists the known networks.

3. **Scroll to the bottom of the list of known networks, and then click Manage
   Wi-Fi Settings.**

   This brings up the Manage Wi-Fi Settings page, which includes a section titled
   Manage Known Networks.

4. **In the Manage Known Networks section, click the network you want to
   forget.**

   The network is selected, as shown in Figure 8-8.

5. **Click Forget.**

   The network will be forgotten. To log into this network again, you'll have to
   enter the security key.
